## DETAILED ACTION

### *Priority*

1. Applicant's claim of priority as a national stage 371 application of application of PCT/SE00/00043 filed 1/13/00 which claims priority to application 9900123-2 filed 1/15/99 in Sweden is made is acknowledged.

### *IDS*

2. The 1449 of paper 7 (filed 8/23/01) have been struck as being redundant subsets of the 1449 of the later-filed-earlier-matched IDS paper 5 (filed 9/13/01).

### *Claim Rejections - 35 USC § 112*

3. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

4. Claims 1-9 are rejected under 35 U. S. C. 112 second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

It is not apparent how close to a step something must be to qualify as "step-like".

### *Claim Rejections - 35 USC § 102*

5. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless --

- (a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.
- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States

Art Unit: 3653

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

6. Claims 1, 3, and 6 are rejected under 35 U.S.C. 102(b) as being anticipated by

Zimmer which discloses:

a first robot part rotatably attached to a second robot part having a sensor (c2 L 35-44), causing at least two detectable changes to pass by the sensor which detects such changes, calculating the position of the target, surface changes changes via a step like notch a step-like notch (2) causing a comparing target position to sensed position (c2 L 54-56), calculating the position to control (c2 L 57-66);

(Re: cl 3) Calculating using a contact sensor (7)

(re: cl 6) device for synchronizing a robot comprising control system (c1 L 33-38)

first robot part and second robot part movably attached to the first robot part with target arranged on first robot part and sensor on second robot part (c2 L 35-44)

target comprising step-like structural changes (2).

### ***Claim Rejections - 35 USC § 103***

7. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

8. Claims 1 and 3-9 are rejected under 35 U.S.C. 103(a) as being unpatentable over

Zimmer and Nakashima et al., wherein Zimmer discloses the elements previously

discussed and further discloses:

Use of shoulder (adjacent region next to 2).

An elevation rather than a groove as the structural change (c2 L 62-64).

Nakashima et al. Discloses any elements not explicitly taught by Zimmer.

(Re: cl 4) target comprises a groove with substantially vertical walls (11a fig 2)

(re: cl 5) target comprises an elevation with substantially vertical sides (11a fig 2)

(re: cl 7) instantaneous level difference in the form of shoulder parts (11a fig 2)

Art Unit: 3653

(re: cl 8) groove with substantially vertical walls (11a fig 2)  
(re: cl 9) elevation with substantially vertical sides (11a fig 2).

It would have been obvious at the time of the invention to make the grooved with substantially vertical walls as in Nakashima et al. to precisely delineate preferred target timing as taught by Nakashima et al. and thereby come up with the instant invention.

It would have been obvious at the time of the invention to make the elevated target with substantially vertical sides to precisely delineate preferred target timing as taught by Nakashima et al. and thereby come up with the instant invention.

9. Claims 1-3 and 6 are rejected under 35 U.S.C. 103(a) as being unpatentable over Zimmer and Webb et al. wherein Zimmer discloses the elements previously discussed and further discloses:

Webb et al. discloses: the use of a non-contact optical sensor for determining the rotational target position (c5 L 1-36).

It would have been obvious at the time of the invention to substitute the contact sensor of Zimmer with a non-contact sensor as in Webb et al. to avoid mechanical wear and damage to the sensor contact as taught by Webb et al. and thereby come up with the instant invention.

### ***Conclusion***

10. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

11. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Exmr. Michael E. Butler whose telephone number is (703) 308-8344.
